The Timothy Plan offers diversification across 4 asset categories, 8 investment styles, 11 funds, 8 management firms, over 762 portfolio holdings and 43 fund managers.

Institutional quality portfolio solution

At The Timothy Plan, we believe following “Kingdom Class” practices is essential in every aspect of our funds. Through a multi-faceted process, each manager is carefully assessed by Timothy Partners, Ltd, our Board of Trustees, and by a team of professional subadviser analysts, to ensure they are a good fit, especially considering the implementation of our biblical screens. As a result, we believe our funds give investors access to some of the industry's best of class money managers.

Investing in a mutual fund may result in a loss of principal. Carefully consider the investment objectives, risks, charges, and expenses before investing. A prospectus is available from the fund or your financial professional that contains this, and other more complete, important information. Please read it carefully before investing or sending money. Distributed by Timothy Partners, Ltd. Member FINRA.

This sample allocation represents The Timothy Plan's Strategic Growth Portfolio target allocation of The Timothy Plan funds; the allocation may fluctuate with market conditions.

Growth & Income fund commenced October 1, 2013.

Money managers and portfolio holdings listed are current as of 9/30/2016. Cash holdings which are not listed in chart above make up 10.5% of the portfolio. Timothy Plan has the right to alter the allocation of the portfolio without a shareholder vote. Investments in the funds are not deposits with or other liabilities of any of the money managers and are subject to investment risk, including loss of income and principal invested and possible delays in payment of redemption proceeds. The money managers do not guarantee the performance of any fund or any particular rate of return.
The Fund's investment objective is to generate moderate levels of long-term capital growth. There is no assurance that the Fund's objective will be achieved. The Fund invests in a variety of foreign securities, which may increase your exposure to risks of foreign currencies, market, and political conditions, and changes in foreign exchange rates. The value of the securities held by the Fund may be subject to changes in value due to political and/or economic conditions in foreign countries, which may be affected by forces not readily predictable. Many foreign securities can be subject to government regulations that may affect the periods for dividend payments and other distributions and the amount of taxes paid by the Fund. If the Fund invests in securities denominated in foreign currencies, the appreciation or depreciation of such currencies relative to the U.S. dollar will affect the value of those securities and the amount of U.S. dollars that can be realized on a sale of such securities. The Fund invests primarily in emerging market securities, which involve risks in addition to those associated with developed country securities. The Fund invests in investment companies, which may subject the Fund to the risks these investment companies face, including non-diversification risk. The Fund may invest in derivatives, which may subject the Fund to risks in addition to those associated with investments held directly by the Fund. The value of the Fund’s investments in derivatives may decline or increase in value, and the amount of income (or loss) realized when derivatives are sold or expire may differ from the amount realized when the underlying assets of the Fund are sold or mature. The Fund may invest in other investment companies, which may subject the Fund to the risks these investment companies face, including, in addition to non-diversification risk, interest rate risk, and dividend reinvestment risk. The Fund may invest in ETFs, which may subject the Fund to risks in addition to those associated with investments held directly by the Fund. The value of the Fund’s investments in ETFs may decline or increase in value, and the amount of income (or loss) realized when ETFs are sold or mature may differ from the amount realized when the underlying assets of the Fund are sold or mature. The Fund may use leverage, which may subject the Fund to risks in addition to those associated with investments held directly by the Fund. The Fund may sponsor a redemption program on a continuous basis, based on its forecast of the overall market. The Fund does not assure a return of capital and may lose money. The Fund may sponsor a redemption program on a continuous basis, based on its forecast of the overall market. The Fund does not assure a return of capital and may lose money. The Fund may sponsor a redemption program on a continuous basis, based on its forecast of the overall market. The Fund does not assure a return of capital and may lose money. The Fund may sponsor a redemption program on a continuous basis, based on its forecast of the overall market. The Fund does not assure a return of capital and may lose money.

**TIMOTHY PLAN FUND'S NET ASSETS INCREASED IN TRADE DURING FUND**

- **5%** of the Fund's total net assets.

**The Following Risks:**

- **General Risk:** There is no assurance that the Fund will achieve its investment objective or that any element of total return will be realized. The value of your investment in the Fund will fluctuate with market conditions and you may lose money upon redemption of your shares. The Fund is subject to differences in response to market and economic conditions between the Fund and the underlying funds. The Fund invests in investment companies, which may subject the Fund to the risks these investment companies face, including, in addition to non-diversification risk, interest rate risk, and dividend reinvestment risk. The Fund may invest in ETFs, which may subject the Fund to risks in addition to those associated with investments held directly by the Fund. The value of the Fund’s investments in ETFs may decline or increase in value, and the amount of income (or loss) realized when ETFs are sold or mature may differ from the amount realized when the underlying assets of the Fund are sold or mature.

**Country-Specific Risk:** One underlying fund invests in Israeli securities, and Israel is subject to unique political and economic risks. As a result, Israeli securities can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The investments in the securities of Israel may experience greater price fluctuation than the investments in the securities of other countries. The value of the securities held by the Fund may be subject to changes in value due to political and/or economic conditions in Israel, which may be affected by forces not readily predictable. Many Israeli securities can be subject to government regulations that may affect the periods for dividend payments and other distributions and the amount of taxes paid by the Fund. If the Fund invests in securities denominated in foreign currencies, the appreciation or depreciation of such currencies relative to the U.S. dollar will affect the value of those securities and the amount of U.S. dollars that can be realized on a sale of such securities. The Fund may invest in other investment companies, which may subject the Fund to the risks these investment companies face, including, in addition to non-diversification risk, interest rate risk, and dividend reinvestment risk. The Fund may invest in ETFs, which may subject the Fund to risks in addition to those associated with investments held directly by the Fund. The value of the Fund’s investments in ETFs may decline or increase in value, and the amount of income (or loss) realized when ETFs are sold or mature may differ from the amount realized when the underlying assets of the Fund are sold or mature.

**Market Risk:** The investments in the securities of emerging market countries may experience more rapid and extreme changes in values in light of their less developed market structures and less mature companies. To the extent that the underlying funds invest in larger sectors of the foreign market. This is because the securities market in Israel is relatively small, with a limited number of companies representing a small number of industries. Issuers in emerging countries are frequently small companies, which may have relatively small market capitalizations. Also, nationalization, expropriation or confiscatory taxation may adversely affect investments in emerging foreign countries. The value of the Fund's investments in the Fund decreases in value and you could lose money.

**Equity Market Risk:** The value of the Fund's investments in the Fund decreases in value and you could lose money.

**Interest Rate Risk:** When interest rates rise, bond prices fall; the higher the coupon rate on a bond, the more sensitive the Fund is to interest rate risk. Exchange Traded Fund Risk: An ETF may trade at a discount to its net asset value. In such cases, an investor may not be able to sell its shares for a price equal to the Fund’s net asset value. When an ETF is purchased with cash, the ETF investor will receive cash equal to the difference between the ETF's net asset value and the ETF investor's purchase price. The Fund may invest in other investment companies, which may subject the Fund to the risks these investment companies face, including, in addition to non-diversification risk, interest rate risk, and dividend reinvestment risk.
